# Pampercrop® Garanty

High assimilation copper

PAMPERCROP®  
NATURAL SHIELD FOR YOUR PLANTS

**Pampercrop® Garanty** is a liquid formulation with 2.51% w/v of lignosulfonate-complexed copper and enhanced by different metabolic activators of natural origin. Copper is needed for plants to breathe. It participates in photosynthesis processes and in the metabolism of carbohydrates and proteins.

Furthermore, copper acts by activating certain enzymes involved in lignin synthesis and is essential for a number of enzyme systems.

**Pampercrop® Garanty** provides the following advantages:

- ✓ It activates cell division of the crop.
- ✓ It favours the use of nitrogen and protein synthesis.
- ✓ It acts as a chlorophyll stabiliser, improving photosynthesis.
- ✓ It enhances the self-defence of the plant against pathogenic attack.
- ✓ It provides greater homogeneity of the entire plantation and of the production.
- ✓ It improves the metabolic processes taking place during the different stages of crop development.

## Physicochemical characteristics

pH: 3.15

Density: 1.12 g/ml at 20°C

Complexing agent: lignosulfonic acid

Total water solubility

## Guaranteed contents (% w/v)

Total Copper (Cu) 2.51

Free amino acids 5.38

## Dosage

*Foliar application*

Sweet fruits

Nuts

Vine

Citrus fruits

Olive trees

Horticultural crops

Alfalfa and other extensive farming crops

200-300 cc/hl  
Multiple applications

2.5 l/Ha Multiple applications

FERTILIZER USABLE IN ORGANIC FARMING  
ACCORDING TO REGULATION (EC) 834/2007  
IN RELATION TO THE UNE 142500 STANDARD
